Purpose:

The purpose of the project is to identify and evaluate a range of alternative surface materials and/or treatments for rehabilitation and maintenance of the 16th Street Mall transit way that reduces the current safety issues and high maintenance costs associated with the granite pavers and improves the reliability of the 16th Street Mall shuttle service.

Need:

- To have reasonable maintenance costs long term
- To minimize the frequency of maintenance
- To increase safety for both transit vehicles and pedestrians
- To improve transit operations and safety during weather events
- To maintain mall aesthetics
- To minimize environmental impacts
- To implement a transit way project that is feasible to implement and maintain
