Denver, CO 80202

Re: Environmental evaluation of the design refinement to intake and exhaust stacks for Denver
Union Station

Dear Mr. Van Meter:

The Federal Transit Administration has completed its review of your proposed design refinements for the intake and exhaust stacks at Denver Union Station. FTA finds that these refinements are consistent with the existing Environmental Impact Statement and Record of Decision for the Denver Union Station project, and that there is no significant environmental impact to the design change.

Should you have any questions regarding this action, please contact David Beckhouse at (720) 963-3306.

Sincerely,

Terry J. Rosapep
Regional Administrator
